All that extra heat energy is disrupting the hydrological cycle, evaporating water vapor from the oceans and leading to stronger storms, more extreme floods, and deeper and longer droughts, declining crop yields, water stresses, the spread of tropical diseases poleward, and refugee crises and political instability, among other problems. In Syria, for example, failures of governance have produced civil conflict, driving migration that transfers economic, social and political pressures into countries already experiencing frustrations with low growth and rising inequality, fuelling radicalization and acts of violence.

This in turn complicates the process of clearing the debt overhangs that in many countries remains an unresolved legacy of the pre-crisis boom, weighing on growth by diverting income towards debt servicing rather than fresh consumption or investment. Here the economy is paramount. The Guardian 24 June
