In micro-economics you are taking these deeply complicated things that are the human brain, how people act and respond to each other, and then you are aggregating it over millions of people, so it's ultra-complicated. You make yourself food. So, this right over here is a quote by Alfred Knopf, who was a publisher in the U.S. Dixit and Nalebuff have basically taken this set of ideas, stripped away a lot of the mathematics—but kept a little bit—and illustrated it with everything from competition policy cases to sports decisions on the tennis court or yachting races. Taking a holistic example in lieu of an easier and obvious one – research proves that the money one earns contributes hugely towards average life happiness in the initial stages of getting those riches, but its role tapers off sharply as the income grows. He is saying, look, when individual actors just act in their own self-interest, that often in aggregate leads to things that each of those individual actors did not intend. But alongside that he wrote this lovely book, *Hidden Order*. You can remove the book from the store if it is unavailable for purchase.
