Meanwhile the number of cruise passengers increased from 7. In the past, Alaskans, as well as others have learned from experience that existing regulations are sometimes not followed and are in many cases not adequate and consequently the environment suffers. This Task Force set out to identify ways to reduce the potentially negative impacts of the cruise industry on Alaska's environment, which led to the

modifications of cruise ship practices.

A typical cruise vessel produces a maximum of 25,000 gallons⁹. We have devised an initiative for cruise lines that would serve as a marketing technique if they exceeded environmental standards.

We can only assume that if the capacity to flush waste adequately is not present in the Inside Passage, the environment can potentially be harmed. When cruise ship passengers choose the package that takes them up to Alaska, they are making a choice that is best for them and Alaska. Unfortunately, during the flood current rising as shown by figure 2 the major add to the pollution, waste, and water needs of the local population, putting local infrastructure and habitats under enormous pressure. The first deadline is January of
